ParkSmart - Member 2 Presentation Script

Smart Parking, Traffic Enforcement & Citizen Reporting System (PS-03)

Member	Member 2	**Role**	Citizen App Lead
Name	Akash T	**Slides**	Slides 5 and 6
Your part	Find parking and citizen reporting	**Speaking time**	about 1 minute 10 seconds

1. What to say

Speak slowly, look at the judges, and use your own words if you forget a line. The last sentence of your part hands over to the next member.

Slide 5 - Find parking

"This is what a citizen sees on the phone. No login is needed. I choose where I am going, for example Goubert Market. The app lists authorised lots by distance with free car and two-wheeler slots, and the numbers change live every few seconds. Each lot shows the rate, timings, how full it will be in one hour, and the best time to come today. Red dashed lines are no-parking stretches. One tap opens navigation."

Slide 6 - Report a violation

"If someone has double-parked or blocked a gate, any citizen can report it in 30 seconds: take a photo, choose the problem, tap the spot on the map, and send. The vehicle number is optional. The citizen gets a report ID and a QR code to track it. The system finds the street name, sets the priority, and links duplicate reports of the same car. Now Vaishnavi will show how CCTV catches violations automatically."

2. Your job in the live demo

- On the phone: Find Parking, choose **Goubert Market**, open **Best time today** on one lot.
- Then Report Violation: take a photo of any car picture, choose **Double parking**, pick **Goubert Market** as the nearby place, type PY01AB1234, Submit.
- Show the report ID and QR to the judges and say: "This report has now reached the Traffic Police." Hand over to Vaishnavi.

Live demo order (about 4 minutes): Akash uses a phone to find parking and report a violation, Vaishnavi runs CCTV detection on the laptop, Susmitha Sree opens the report, issues the challan and shows the recommended actions, Kavini tracks the report and records a violation on the ParkSmart Mobile app, Siddharth closes and invites questions.

3. Questions you answer

Q1. How do you know how many slots are free?
In the prototype, the parking attendant taps + and − on a phone at the gate, and a sensor simulation keeps the numbers moving. In deployment, boom barriers, ground sensors or cameras send the same counts.
Remember: Attendant phone now, sensor later.

Q2. How is the 1-hour forecast made?
Each lot has an hourly demand pattern, like market, beach, temple or bus stand, with a weekend factor. We take the live count and add the expected change for the next hour.
Remember: Live count + next hour pattern.

Q3. What if people send false reports?
An officer checks every report on the spot before any fine. Rejected reports are counted, so we know how reliable each channel is. The page warns against false reports, and there is a limit of 10 reports per device in 10 minutes.
Remember: Officer verify pannaama fine illa.

Q4. Why does GPS not work in the phone browser?
Browsers allow GPS only on secure https sites, so on our local Wi-Fi demo the user picks a nearby place or taps the map. The ParkSmart Mobile app uses the phone's GPS directly, and on a real https server the browser GPS works too.
Remember: Browser-la block; app-la GPS work aagum.

4. Numbers to remember

- 14 lots, about 840 car slots and 2,700 two-wheeler slots
- 8 violation types
- Duplicate window: 30 minutes

5. Practice checklist

[ ] Read your part aloud 3 times with a timer.
[ ] Practise your demo clicks on the laptop or phone once.
[ ] Answer your questions without looking at this sheet.
[ ] Full team rehearsal on 12 Oct, twice.
