ParkSmart - Member 3 Presentation Script

Smart Parking, Traffic Enforcement & Citizen Reporting System (PS-03)

Member	Member 3	**Role**	Enforcement Lead
Name	Vaishnavi N	**Slides**	Slides 7 and 8
Your part	CCTV detection and how reports are checked	**Speaking time**	about 1 minute 10 seconds

1. What to say

Speak slowly, look at the judges, and use your own words if you forget a line. The last sentence of your part hands over to the next member.

Slide 7 - CCTV detection

"Police cannot watch every camera all day. ParkSmart tracks each vehicle in the camera view and measures how long it stays stopped inside the red no-parking zone. If it stays longer than the allowed time, here two minutes, the frame is captured with the vehicle number and a report is filed automatically. In our prototype the camera feed is simulated; in deployment the same rule runs on an ANPR model on existing CCTV. Citizen, CCTV and officer reports all go into one queue, and every photo gets a SHA-256 fingerprint so the evidence cannot be changed."

Slide 8 - Results

"We also measure whether reports are useful. In our simulated data, 82 percent of citizen reports were confirmed valid by officers, and the median time from report to action was 27 minutes. The chart shows where violations concentrate: Mission Street, Nehru Street and MG Road. Now Susmitha Sree will show what the police do with this."

2. Your job in the live demo

- On the laptop: open **CCTV Detection**, set Speed to 4x, press **Send a car into the zone**.
- Point at the timer above the car: yellow, then orange, then red VIOLATION. Say: "It has filed the report by itself."
- Click the report ID in Detection events to show the saved frame and SHA-256. Hand over to Susmitha Sree.

Live demo order (about 4 minutes): Akash uses a phone to find parking and report a violation, Vaishnavi runs CCTV detection on the laptop, Susmitha Sree opens the report, issues the challan and shows the recommended actions, Kavini tracks the report and records a violation on the ParkSmart Mobile app, Siddharth closes and invites questions.

3. Questions you answer

Q1. Is the CCTV detection real?
The video is simulated for the demo, but the rule is real: track the vehicle, measure stop time inside the zone, file a report with the frame. A real system plugs an ANPR or YOLO detector into the same rule.
Remember: Video simulated; rule real.

Q2. Why dwell time and not just one photo?
A car stopping for 10 seconds to drop someone is not parking. Measuring how long it stays avoids fining people who only stopped briefly.
Remember: Drop panna fine illa; park pannaa dhaan.

Q3. What is SHA-256?
It is a fingerprint of the photo file. If even one pixel changes, the fingerprint changes, so we can prove the evidence was not edited.
Remember: Photo-ku fingerprint.

Q4. How is the 82% calculated?
Every closed report ends as Challan, Towed or Warned, which count as valid, or Rejected or Duplicate. 82% of closed citizen reports were valid.
Remember: Valid / closed = 82%.

4. Numbers to remember

- Allowed stop: 1 to 5 minutes, default 2
- 82% of citizen reports valid
- 27 minutes median response
- Top hotspot: Mission Street

5. Practice checklist

[ ] Read your part aloud 3 times with a timer.
[ ] Practise your demo clicks on the laptop or phone once.
[ ] Answer your questions without looking at this sheet.
[ ] Full team rehearsal on 12 Oct, twice.
